

ABSTRACT

A golf club head comprising an integral toe, heel and center section, with the center section including a cavity. The center section is structured so that the majority of the weight of the golf club head is positioned at the toe and heel. One embodiment of the golf club head includes an insert located in the cavity and a second insert is located in the golf ball striking face of the golf club head. The inserts, alone and in combination, increase the feel transmitted through the golf club head to the golfer.
